ASNT5090-PQC DC-32Gbps Broadband Digital 1:2 Demultiplexer

- High speed broadband 1:2 Demultiplexer
- Exhibits low jitter and limited temperature variation over industrial temperature range
- Ideal for high speed proof-of-concept prototyping
- Fully differential CML input interfaces
- Fully differential CML output interface with 400mV single-ended swing
- Single +3.3V or -3.3V power supply
- Power consumption: 730*mW*
- Fabricated in SiGe for high performance, yield, and reliability
- Standard MLF/QFN 24-pin package

Offices: 310-530-9400 / Fax: 310-530-9402 www.adsantec.com

DESCRIPTION

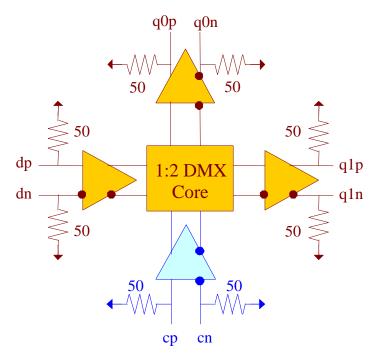

Fig. 1. Functional Block Diagram

The temperature stable ASNT5090-PQC SiGe IC can be utilized as a high speed 1:2 demultiplexer, and is intended for use in high-speed measurement / test equipment. The IC shown in Fig. 1 can receive a high speed differential data input signal dp/dn and effectively demultiplex it into two high speed differential data output signals q0p/q0n and q1p/q1n by using a high speed differential clock input signal cp/cn.

The part's I/O's support the CML logic interface with on chip 50*Ohm* termination to vcc and may be used differentially, AC/DC coupled, single-ended, or in any combination (see also POWER SUPPLY CONFIGURATION). In the DC-coupling mode, the input signal's common mode voltage should comply with the specifications shown in ELECTRICAL CHARACTERISTICS. In the AC-coupling mode, the input termination provides the required common mode voltage automatically. The differential DC signaling mode is recommended for optimal performance.

POWER SUPPLY CONFIGURATION

The part can operate with either negative supply (vcc = 0.0V = ground and vee = -3.3V), or positive supply (vcc = +3.3V and vee = 0.0V = ground). In case of the positive supply, all I/Os need AC termination when connected to any devices with 50Ohm termination to ground. Different PCB layouts will be needed for each different power supply combination.

Offices: 310-530-9400 / Fax: 310-530-9402 www.adsantec.com

All the characteristics detailed below assume vcc = 0.0V and vee = -3.3V.

ABSOLUTE MAXIMUM RATINGS

Caution: Exceeding the absolute maximum ratings may cause damage to this product and/or lead to reduced reliability. Functional performance is specified over the recommended operating conditions for power supply and temperature only. AC and DC device characteristics at or beyond the absolute maximum ratings are not assumed or implied. All min and max voltage limits are referenced to ground.

Table 1. Absolute Maximum Ratings

Parameter	Min	Max	Units
Supply Voltage (vee)		-3.6	V
Power Consumption		0.80	W
RF Input Voltage Swing (SE)		1.0	V
Case Temperature		+90	°C
Storage Temperature	-40	+100	°C
Operational Humidity	10	98	%
Storage Humidity	10	98	%

TERMINAL FUNCTIONS

TI	ERMIN	AL		DESCRIPTION			
Name	No.	Type					
	High-Speed I/Os						
dp	20	CML	Differentia	al data input signals with internal 50 <i>Ohm</i> termination			
dn	22	input	to vcc.				
q0p	16	CML	Differential data output signals with internal 50 <i>Ohm</i>				
q0n	14	output	termination to vcc.				
q1p	10	CML	Differential data output signals with internal 50 <i>Ohm</i>				
q1n	8	output	termination to VCC.				
ср	2	CML	Differential clock input signals with internal 50 <i>Ohm</i>				
cn	4	input	termination to VCC.				
Supply and Termination Voltages							
Name	Description		ion	Pin Number			
vcc	Positive power supply.		r supply.	1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23			
	(+3.3V or 0)		(0)				
vee	Negative power supply.		r supply.	6, 12, 18, 24			
	(0V or -3.3V)		3 <i>V</i>)

Data rate	DC		16	Gbps		
Logic "1" level		VCC		V		
Logic "0" level		vcc-0.4		V	With external 50 <i>Ohm</i> DC termination	
Rise/Fall times	7	9	11	ps	20%-80%	
Output Jitter			1	ps	Peak-to-peak	

PACKAGE INFORMATION

The chip die is housed in a standard 24-pin QFN package shown in Fig. 2. It is recommended that the center heat slug located on the back side of the package is soldered to the **vee** plain that is ground for the positive supply or power for the negative supply.

The part's identification label is ASNT5090-PQC. The first 8 characters of the name before the dash identify the bare die including general circuit family, fabrication technology, specific circuit type, and part version while the 3 characters after the dash represent the package's manufacturer, type, and pin out count.

This device complies with the Restriction of Hazardous Substances (RoHS) per 2011/65/EU for all ten substances.

REVISION HISTORY

Revision	Date	Changes			
2.1.2	05-2020	Updated Package Information			
2.0.2	07-2019	Updated Letterhead			
2.0.1	02-2013	Revised title			
		Revised pin out drawing			
		Revised functional block diagram			
		Added power supply configuration			
		Added absolute maximum ratings			
		Revised terminal functions			
		Revised electrical characteristics			
		Revised package information			
		Added mechanical drawing			
		Format correction			
1.2	04-2010	Revised electrical characteristics			
		Added package information			
1.0	10-2008	First release
