DESCRIPTION

The temperature stable ASNT5037-PQC SiGe IC provides extremely low jitter broadband signal amplitude control capability between its input and output signal ports and is intended for use in high-speed measurement / test equipment. ASNT5037-PQC can process an up to $17Gbps$ data signal and deliver output signal amplitudes between $0.0V-1.0V$ through the up to $100MHz$ external adjustment of its differential tuning port. The part's I/Os support the CML logic interface with on chip 50Ω termination and may be used differentially, AC/DC coupled, single-ended, or in any combination. It operates from a single $\pm 3.3V$ power supply.
