ASNT5190B-MOD
DC-64*Gbps* Broadband Digital 1:2 Demultiplexer Module

- High speed broadband 1:2 Demultiplexer
- External control of internal clock's duty cycle
- Exhibits low jitter and limited temperature variation over industrial temperature range
- Ideal for high speed proof-of-concept prototyping
- Fully differential CML input interface
- Fully differential CML output interface with 400*mV* single-ended swing
- Single -3.3*V* power supply
- Power consumption: 600*mW*
- Custom metal package with excellent high-speed characteristics
- Incorporates a SiGe IC for high performance, yield, and reliability

DESCRIPTION

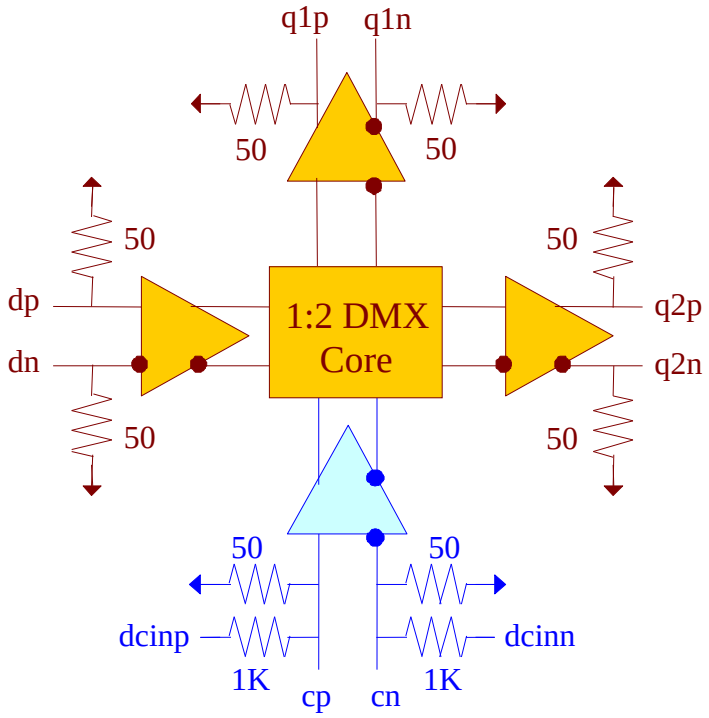

Fig. 1. IC Functional Block Diagram

The temperature stable ASNT5190B-MOD is a module with a SiGe IC inside. It can be utilized as a high speed 1:2 demultiplexer, and is intended for use in high-speed measurement / test equipment. The internal IC shown in Fig. 1 can receive a high speed differential data input signal dp/dn and effectively demultiplex it into two high speed differential data output signals q1p/q1n and q2p/q2n by using a high speed differential clock input signal cp/cn. The duty cycle of the internal clock can be adjusted through ports dcinp/dcinn.

The part's I/O's support the CML logic interface with on chip 50*Ohm* termination to vcc and may be used differentially, AC/DC coupled, single-ended, or in any combination (see also POWER SUPPLY CONFIGURATION). In the DC-coupling mode, the input signal's common mode voltage should comply with the specifications shown in ELECTRICAL CHARACTERISTICS. In the AC-coupling mode, the input termination provides the required common mode voltage automatically. The differential DC signaling mode is recommended for optimal performance.

POWER SUPPLY CONFIGURATION

The part operates with a single negative supply (vcc = 0.0*V* = ground and vee = −3.3*V*).

ABSOLUTE MAXIMUM RATINGS

Caution: Exceeding the absolute maximum ratings shown in Table 1 may cause damage to this product and/or lead to reduced reliability. Functional performance is specified over the recommended operating conditions for power supply and temperature only. AC and DC device characteristics at or beyond the absolute maximum ratings are not assumed or implied. All max voltage limits are referenced to ground.

Table 1. Absolute Maximum Ratings

Parameter	Min	Max	Units
Supply Voltage (vee)		-3.6	*V*
Power Consumption		0.65	*W*
RF Input Voltage Swing (SE)		1.0	*V*
Case Temperature		+90	*ºC*
Storage Temperature	-40	+100	*ºC*
Operational Humidity	10	98	*%*
Storage Humidity	10	98	*%*

TERMINAL FUNCTIONS

TERMINAL			DESCRIPTION
Name	**No.**	**Type**	
High-Speed I/Os			
dp	21	CML input	Differential data input signals with internal 50*Ohm* termination to vcc
dn	23		
q1p	17	CML output	Differential data output signals with internal 50*Ohm* termination to vcc
q1n	15		
q2p	11	CML output	Differential data output signals with internal 50*Ohm* termination to vcc
q2n	9		
cp	3	CML input	Differential clock input signals with internal 50*Ohm* termination to vcc
cn	5		
Control Ports			
dcp	19	Analog inputs	cp common mode control voltage
dcn	7		cn common mode control voltage
Supply and Termination Voltages			
Name	**Description**		**Pin Number**
GND	Ground (0*V*)		10
-V	Negative power supply (-3.3*V*)		1, 13
