The Photline MX-LN series are lithium niobate (LiNbO<sub>3</sub>) intensity modulators designed for optical communications at data rates up to 44 Gb/s.

The X-cut design of these Mach-Zehnder modulators confer them an unmatched stability in a wide range of operational conditions, as well as a zero chirp performance. Ixblue proprietary waveguide design offers a low insertion loss combined with a high contrast. The MX-LN series are ideally suited for 10 Gb/s up to Gb/s optical transmission with NRZ, RZ, DPSK, Duo Binary modulation formats and are key device for a large variety of high bandwidth applications.
